Education

PhD Computer Science, Stanford University, GPA: 4.031 — *2020-2025*
Meta PhD Research Fellow: Computational Social Science — *Stanford, CA*
National Science Foundation Graduate Fellow

MSc Statistical Science, University of Oxford, 2020, Distinction (Highest Honors) — *2019-2020*
Daniel M. Sachs Class of 1960 Graduating Scholarship at Worcester College — *Oxford, UK*

MSc Advanced Computer Science, University of Oxford, 2019, Distinction (Highest Honors) — *2018-2019*
Daniel M. Sachs Class of 1960 Graduating Scholarship at Worcester College — *Oxford, UK*

BSE Electrical Engineering, Princeton University, 2018, Highest Honors, GPA: 3.982 — *2014-2018*
Concentration: Information Security and Privacy — *Princeton, NJ*
Minors: Applications of Computing, Robotics and Intelligent Systems

Proficient Languages: Java, Python, C, Go, R, Git, TensorFlow, PyTorch, Huggingface
Experienced Languages: Mandarin Chinese (HSK 4), MATLAB, C#, C++

Professional Experience

Microsoft Software Engineering Intern — *Summer 2018*
Microsoft Business Applications Group Data Engine Team Software Intern, — *Seattle, WA*

- Implemented a new framework in C# for Microsoft Business Application Group's mobile offline synchronization tool allowing the tool to scale more efficiently to 2x the number of users while reducing synchronizing time by 75%.
- Tested newly designed framework by utilizing 7 unique load and stress tests on a 30 server scale group to ensure the robustness of the implementation.
- Created concurrent row versioning feature across multiple servers for use in the mobile offline synchronization tool allowing more efficient data retrieval.

Google Software Engineering Intern — *Summer 2017*
Google Gmail Security Team Software Intern — *Sunnyvale, California*

- Designed and implemented a new security feature for Gmail Android to analyze outgoing email addresses and reduce user vulnerability.
- Implemented client security logic to decrease client requests' latency and bandwidth for processing recipient addresses to the Gmail backend server.
- Refactored and streamlined Gmail frontend and backend code to improve reliability and readability of code analyzing outgoing recipient addresses.
